RE: IRON REPLACEMENT

Your recent laboratory investigations show that you require iron replacement. In order to bring your level back within a normal range, an infusion of an iron replacement mixture is required. It is important to have sufficient iron for cell function and to carry oxygen throughout the body.

1. Attached are instructions with the location of your iron infusion appointments. You have been scheduled for 5 iron infusions.
2. **If you have a family history of hemochromatosis, please let your IBD health practitioner know as soon as possible (before attending any infusion appointments).**
3. Eight weeks after the completion of your infusions, you will need to recheck your levels, with the enclosed lab requisition.

I have also notified your family doctor that you require these infusions.

If you have any questions or concerns please feel free to contact our office at 780-492-8691 ext. 1.

Sincerely,

**Dictated, but not read
to avoid delay in sending**
