

Patient Information Sheet: Summary of Biologics

Goal: Understand the different types of biologics available and their different names.

Human Antibody to	Generic Name	Innovator Name	Biosimilars
Tumor necrosis factor (anti-TNF)	Adalimumab	Humira®	Adrilada™, Amjevita™, Cyltezo®, Hadlima™, Hulio®, Hyrimoz®, Idacio®, Yuflyma®, Yusimry™
Tumor necrosis factor (anti-TNF)	Infliximab	Remicade®	Avsola®, Inflectra®, Renflexis®
Tumor necrosis factor (anti-TNF)	Golimumab	Simponi®	
Integrin alpha-4-beta-7 adhesion molecule	Vedolizumab	Entyvio®	
Interlukin-12 and Interlukin-23	Ustekinumab	Stelara®	

Legend:

- **Human antibody to** refers to the what protein/molecule in the body that the medication is designed to bind/block.
- **Generic name** refers to the non-brand name of the medication. For biologics, the generic name is usually the name of the antibody or active ingredient.
- **Innovator name** refers to the brand name of the drug as decided by the company who first developed the biologic.
- **Biosimilars** refers to the name of drugs that are similar but not exact copies of the biologic. They contain the same active ingredient and same mechanism of action as the biologic.
